
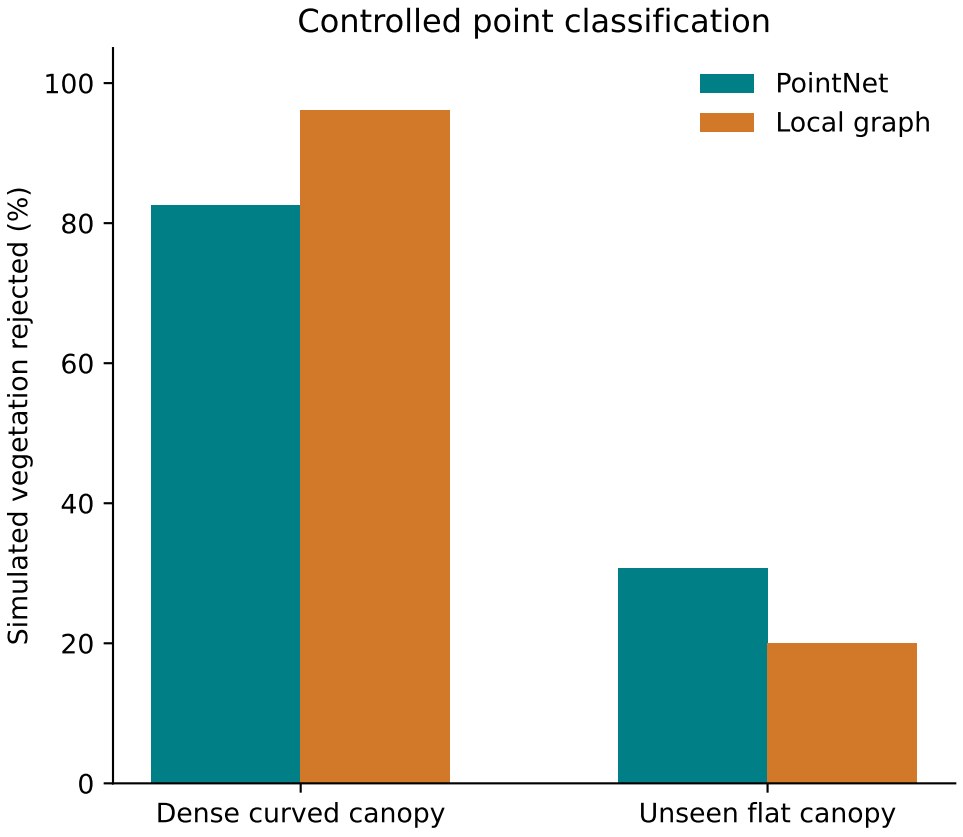
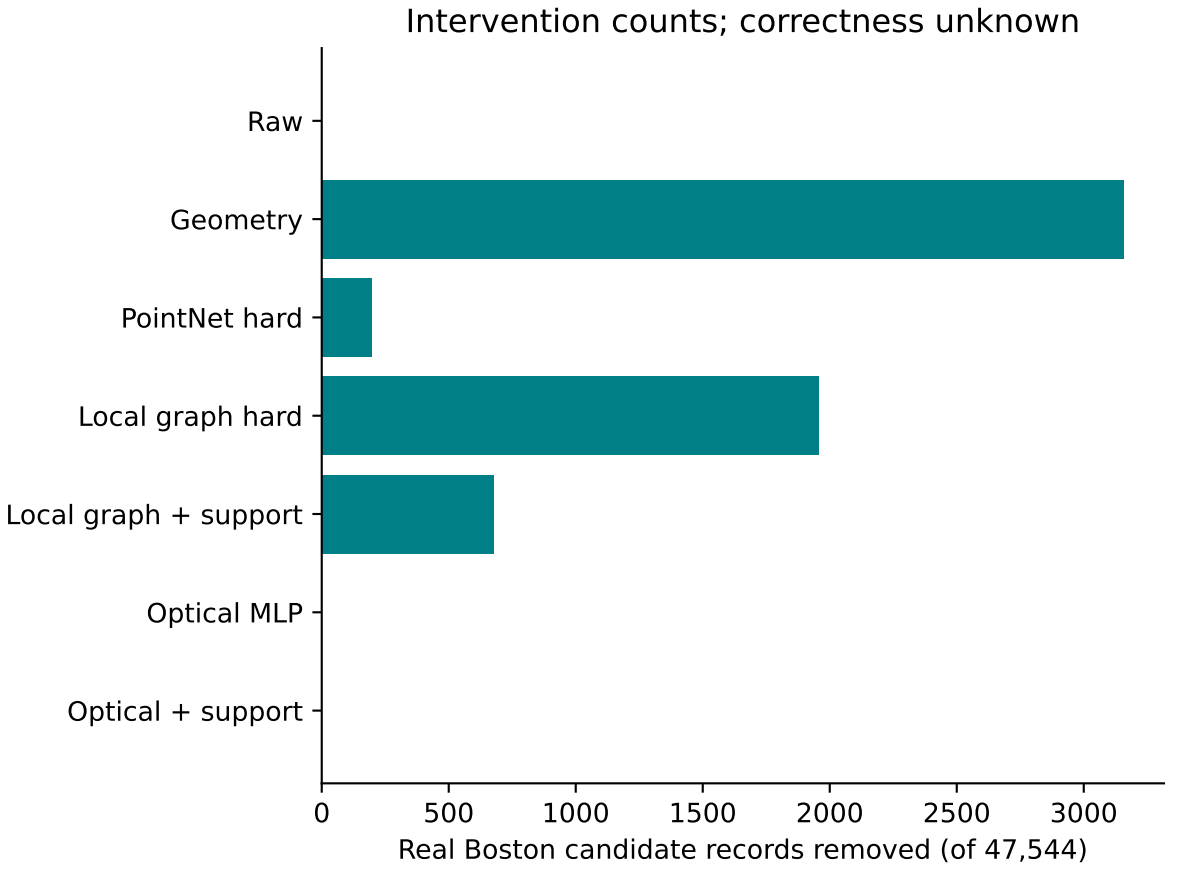
24 fixed Amsterdam roofs per condition; 6 conditions x 5 methods = 720 fits. Native LoD2 output and full XY roof coverage in all fits.
Synthetic observations sampled from 3DBAG automatic meshes. These errors are NOT independent measured real-world accuracy.

Frozen source models: controlled robustness and real-data transfer





Boston: 18 source instances (13 >=30m2, 5 tiny fragments); 17 use historical mesh-derived XY priors.
2011 reference vs 2013-14 LiDAR and 2014 NAIP; no accepted independent roof/point GT. No target tuning.
